QuikAir® 0900 Air Contact Deodorizer

QuikAir® 0900 concentrate deodorizer is a new type of atomization (misting) product designed for improved odor management at large outdoor facilities such as landfills, compost sites, and wastewater treatment facilities.

QuikAir® 0900 is specially formulated to weigh less than water and evaporate at a faster rate than water. Still, it is completely soluble in water, and can be diluted up to 2000 parts water to 1 part QuikAir® 0900.

During application, a significant percentage of QuikAir® 0900 separates from the water as a vapor, allowing it to stay in the air a much longer time and increasing the chance of contact with odorous vapors.

QuikAir® 0900 is designed to be effective against a wide range of odorous chemical groups including ammonia and most amines, VOC's including aldehydes and ketones, mercaptans, and organic acids.

QuikAir® 0900 is completely non-toxic, eco-friendly, and 100% biodegradable. All components are cosmetic grade or higher. QuikAir® 0900 requires no special shipping or handling.
